

PROBLEM STATEMENT:

Add the missing function and operator definitions to the set.h file. Write a driver that demonstrates that your additions work. Use the following sets as part of your demonstration

```
A {1,3,8}
B {2,3,5,10}
C {4,6}

show
    A && B
    A - B
    A || B
    A / B
    A && C
    A - C
    A || C
    A / C
```

CODE:

Get the set_h.txt and Array_V class files. This set_h.txt file contains both the class definition along with it's implementation.

Your program is to have the files : cs132Lab4_driver.cpp, array_v.h, , array_v.t , array_v. cpp
set.h, set.t, and set.cpp.

So you must create set.h, set.t, and set.cpp. (copy/paste appropriate items from set_h.txt into those files.)

The driver is to demonstrate the functionality of your changes. For example all sets are to be created by the add member function. Be sure to print out the sets A, B, C.

All files must have the appropriate file comment header

You need not add function comment headers.

DELIVERABLES:

The files set.h, set.t and lab4_client_driver.cpp with the output from the console window pasted at the end of the driver source code; stapled of course.

Due Date : 3 March 2026 in class
